WUDUMAT BY HERONRIB

The WuduMat gives you added safety, slip resistance, multi-directional drainage and maximum hygiene. WuduMat contains permanent anti-microbial and anti-fungal properties, which helps protect fungal and bacterial foot infections which is hugely important in mosque ablution areas which are often wet and humid.

Made from strong, non-porous PVC sections with channelled underbars, our matting will automatically self-drain even the largest amounts of water. Therefore, its design provides superior performance in wudu areas and helps prevent water from entering the prayer hall.

WuduMat by Heronrib is available in 10m rolls in widths of 500mm, 1m or 1.2m or cut to specific lengths with a slight surcharge. WuduMat is also available shaped to fit the WuduMate Compact and Classic.

INSTANT FOUR-WAY DRAINAGE

It is available in a range of colours.
